

# Executive Vision

Skillset is a premium international learning marketplace where teachers build trusted education products, students learn inside course-linked communities, and the platform manages payments, credentials, AI support, WhatsApp engagement, and growth tools.

# What Exists Now + What Comes Next

A live foundation already exists. The strategy is to turn it into a complete platform without losing clarity or trust.

## Live foundation

Firebase Hosting, Auth, Firestore, Storage, roles, app shells.

## Teacher Studio

Course drafts, builder, media uploads, pricing, review submission.

## Student Portal

Enrollments, lessons, progress, communities, events, credentials.

## Commerce + Trust

Stripe Checkout/Connect, moderation, Ops review, certificate verification.

## Teacher growth

Landing pages, AI course copilot, templates, marketing support.

## Learner accountability

Assessments, proofs of progress, gamification, networking graph.

## Engagement layer

WhatsApp reminders, notifications, cohort prompts, AI tutor.

## Scale layer

Institutions, international currency, advanced credentials, analytics.

# Competitor Landscape

The market is validated by major platforms, but no single competitor combines the full Skillset thesis.

## Skool

Community, courses, events, paid communities, gamification, simple creator setup.

## Hotmart

Creator commerce, members area, customization, communities, certificates, AI tutor, WhatsApp signals.

## Kajabi

Marketing suite, landing pages, funnels, websites, email, offers, community.

## Thinkific / Teachable

Course builder demand, but users cite limited customization, feature gaps, cost, and discoverability.

**Market conclusion: Skillset should not copy one competitor. It should combine course quality, community energy, creator commerce, growth tools, and trust infrastructure into one premium international platform.**

# Market Gaps + Skillset Differentiators

The strongest opportunity is to solve the gaps creators and learners still feel after using current tools.

**Fragmented tools**

**Unified course, community, payments, certificates, support, WhatsApp**

**Weak accountability**

**Progress, assessments, learning proof, outcome-based gamification.**

**Teacher marketing friction**

**Landing pages, checkout links, preview lessons, analytics, campaign s**

**Shallow trust**

**Teacher/course approval, moderation, verified certificates, public verif**

**Complex creator ops**

**Guided Studio, templates, checklists, support queues, AI assistant.**

# Global Platform Ecosystem

A connected operating system for public discovery, teacher production, student progress, and trust operations.

# Core Product Loop + Journeys

Every major feature should strengthen the loop from teacher expertise to learner outcomes and verified proof.

# Roadmap + Milestones

Skillset should scale in disciplined phases: foundation, teacher workflow, student outcomes, commerce, engagement, and international expansion.

# Final Objective

Skillset becomes a professional learning network, not a content locker, funnel tool, or isolated community clone.

## For students

Learn, interact, track progress, attend live sessions, earn verifiable credentials.

## For teachers

Build courses, publish communities, sell through checkout, grow with analytics and marketing tools.

## For Skillset

Own a differentiated international learning network with trust, AI, WhatsApp, and credentialing.

**Strategic moat: Skillset combines learning quality, community engagement, creator commerce, verified outcomes, AI assistance, WhatsApp-native engagement, and a guided teacher business layer. That combination is stronger than being only a marketplace, only a members area, or only a community.**
